

Methicillin-Resistant Staphylococcus Aureus (MRSA) Bacteraemia Rates

Staphylococcus aureus is a type of bacterium that lives on the skin and mucous membranes of healthy people. Occasionally, S. aureus can cause an infection. When S. aureus develops resistance to certain antibiotics, it is called Methicillin-Resistant Staphylococcus aureus, or MRSA.

HDGH has a team dedicated to Infection Prevention and Control working in partnership with all of our care providers to protect our patients and reduce the spread of hospital-acquired infections.
