GERIATRIC ASSESSMENT PROGRAM (GAP)

The Geriatric Assessment Program (GAP) is a voluntary, short-term program delivered by an interdisciplinary team. Specialized comprehensive geriatric assessments are provided for older adults (age 65+) who are exhibiting progressive cognitive changes, where a diagnosis of dementia has not yet been established.

The interdisciplinary team will work together to provide consultation, education, capacity building, and advocacy for the individual and their formal and/or informal care partners. Comprehensive assessments will guide recommendations for care planning, clinical management, and early identification to help support the right care for individualized needs.

TARGET POPULATION

- Individuals aged 65+ with progressive cognitive changes that is causing functional decline.
- Individuals living in the Windsor-Essex region.

SPECIALIZED GERIATRIC OUTPATIENT PROGRAMS

Specialized geriatric outpatient programs are designed to help decrease hospitalization and support clients to remain/transition safely to their home or Long-Term Care Centre within the community. Services are designed to provide specialized assessments that may support a diagnosis, education for capacity building, increased coordination and collaboration between care systems, and ensure clients have access to the services and resources that best suit their needs.

It is still the responsibility of the client's family physician or nurse practitioner to monitor their primary healthcare. HDGH Specialized Geriatric Outpatient Services enhance continuity of care by:

- Identifying and supporting the needs of older adults with cognitive and/or mental health concerns residing in the community and LTC facilities
- Providing specialized assessments and developing individualized care plans to maximize functioning and quality of life
- Establishing linkages and collaborating with other community care providers and the client and their family/care partners
- Educating client, family/care partners, and/or other social service providers

REFERRALS

Referrals to both Specialized Geriatric Services at HDGH must be made by a physician or nurse practitioner. One referral form is used for both programs.

GERIATRIC MENTAL HEALTH OUTREACH TEAM (GMHOT)

GMHOT is a voluntary, short-term program that works to enhance the mental health and well-being of individuals (65+) living at home in the community, or in long-term care homes, who exhibit significant mental health concerns and/or behavioural expressions associated with cognitive impairment.

The goals of GMHOT are to optimize the health and well-being of older adults experiencing mental health concerns or behaviours associated with cognitive impairment to reduce Emergency Department visits/the need for psychiatric admissions, and to enhance the knowledge and skills of formal and informal care partners.

TARGET POPULATION

- Individuals aged 65+ who exhibit significant mental health issues and/or behavioural expressions associated with cognitive impairment.
- Individuals living in the Windsor-Essex region.
